# Microsoft Loves Linux

# What is PowerShell? in One Slide?

- > Everything is an Object
- > Powerful Pipeline
- > Built on the .NET Framework
- > A Management and Scripting Tool
- > The Automation “Glue”

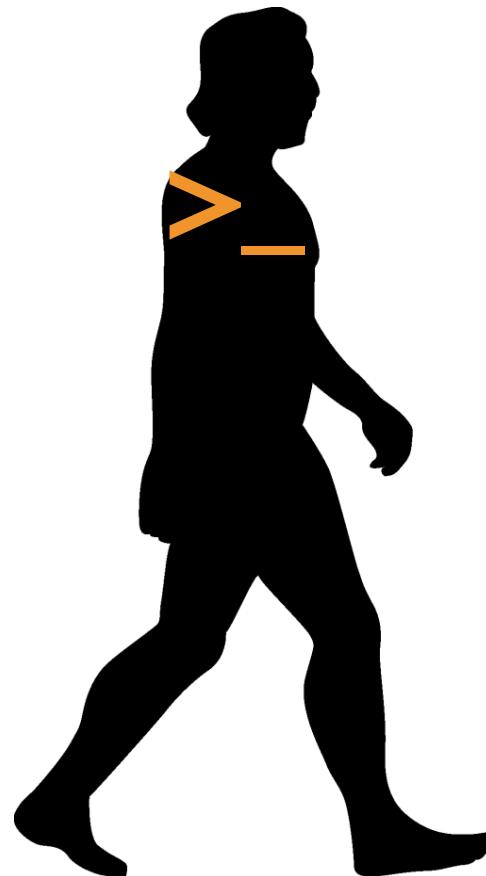

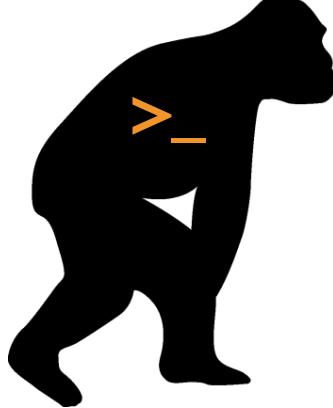

# PowerShell's History

Originally intended to be  
Unix Tools for Windows

Evolved due to  
Architecture Differences

Built as an  
Automation Framework

# PowerShell vs. Bash

- > STD\* Goes Away
- > String Parsing Goes Nil
- > PowerShell is .NET
- > Bash Utilities Only Represented Differently
- > In the end...It Doesn't Really Matter

# Our Worlds are Coming Together

- > The Goal is to Standardize
- > Companies Aren't All Linux or All Windows
- > We'll All Be Automators
